

Slack Water Correction Figures

The table shows the amount of time before or after low and/or high water Liverpool (Alfred Dock) that slack water occurs at the location shown. Slack may only be true for either high water or low water.

Warning. These are estimates. Slack times will vary due to many factors from one day to the next.

Make sure you check the tide on site before committing divers to their dive.

		Before	After			Before	After
1	Liverpool	00:00		40	Gwenfaen slk	01:30

Where no indication of tide is given it is likely that the correction was copied from a tide tables booklet and indicates the low water correction figure for that location. Not necessarily slack water.

The information to produce this table has come from many sources: Tyn Rhos Diving, Chris Holden, Gwynedd sub-Aqua Club particularly Jeremy Carroll and local fishermen. Hugh Evans 14/07/2011.
